# MUSE

An orchid as mysterious and elusive as the muses who inspire artists. Its wild flowers reflect an unquenchable desire for freedom. An inexhaustible source of creativity and vitality.

The meandering branches give Muse its bold form. The branches are twisted by hand, making each plant unique. Due to its compact size, Muse is a beautiful plant on tables and looks stunning in arrangements.

## NO. 7

A tribute to the most famous perfume house in the world. Close your eyes and let yourself be carried away by the ethereal scent of the delicate flowers. A fleeting perfume, sweet and subtle.

Most orchids have no scent, which is what makes this variety so special. At night, this plant converts CO<sub>2</sub> into oxygen. This process releases a wonderful natural scent, which you can smell especially in the morning. Another striking feature are the small flowers in mostly soft pastel shades.
